

Project of focal infection

We would like to share one project, which was created by the Czech Dental Chamber as medical interdisciplinary project focused on the issue of focal infection centres of odontogenic origin which has been and still is controversial. The project of focal infection is about cooperation of dentistry with diabetology, orthopaedics, cardiology and cardiovascular surgery, otolaryngology, oncology, haemato-oncology and organ transplantations. This work was finished with publishing of focal infection web page <https://fokusy.cz/> in three languages Czech, English and German.
