

Integrating oral health into everyday life of elderly dependent people

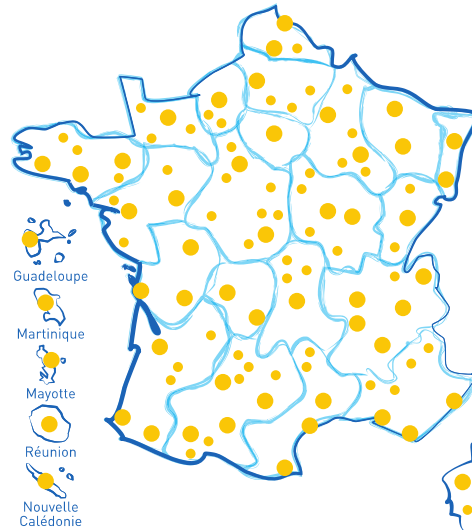

With Oralien

The UFSBD, a major player in oral health

A reference association with a strong territorial network

- Association created in 1966 by the profession
- Official organization for preventive care and promotion of oral health in France
- WHO collaborating center
- Working with public agencies and proposing preventive strategies
- 1 national entity
- 13 regional delegations
- 101 local unions
- 15,000 dentists involved in public health in and out of their dental offices

Providing access to good oral health for all

Access to oral health FOR ALL is a major issue requiring an approach which promotes social equity.

In oral health, good hygiene is a prerequisite for early prevention, for less intrusive care and reduced need for care.

It is therefore important to sensitize elderly people , and their families and to train the carers.

→ We have been developing these training actions for more than 20 years, associated or not with screenings, but today we want to go further.

UFSBD's vision for oral health of dependent elderly people

LA SANTÉ ORALE SE VIT AU QUOTIDIEN

Improving the everyday
quality of life of elderly
dependent people

- Avoiding the dental care breakdown
- Detecting early care needs
- Training dental teams and mobilizing them to care for the elderly dependent people

Improving the oral health of dependent
individuals by improving daily oral
hygiene

Including oral health in the
projects of the nursing homes,
and, in the future, at home

- Staff training sessions
- Family awareness sessions

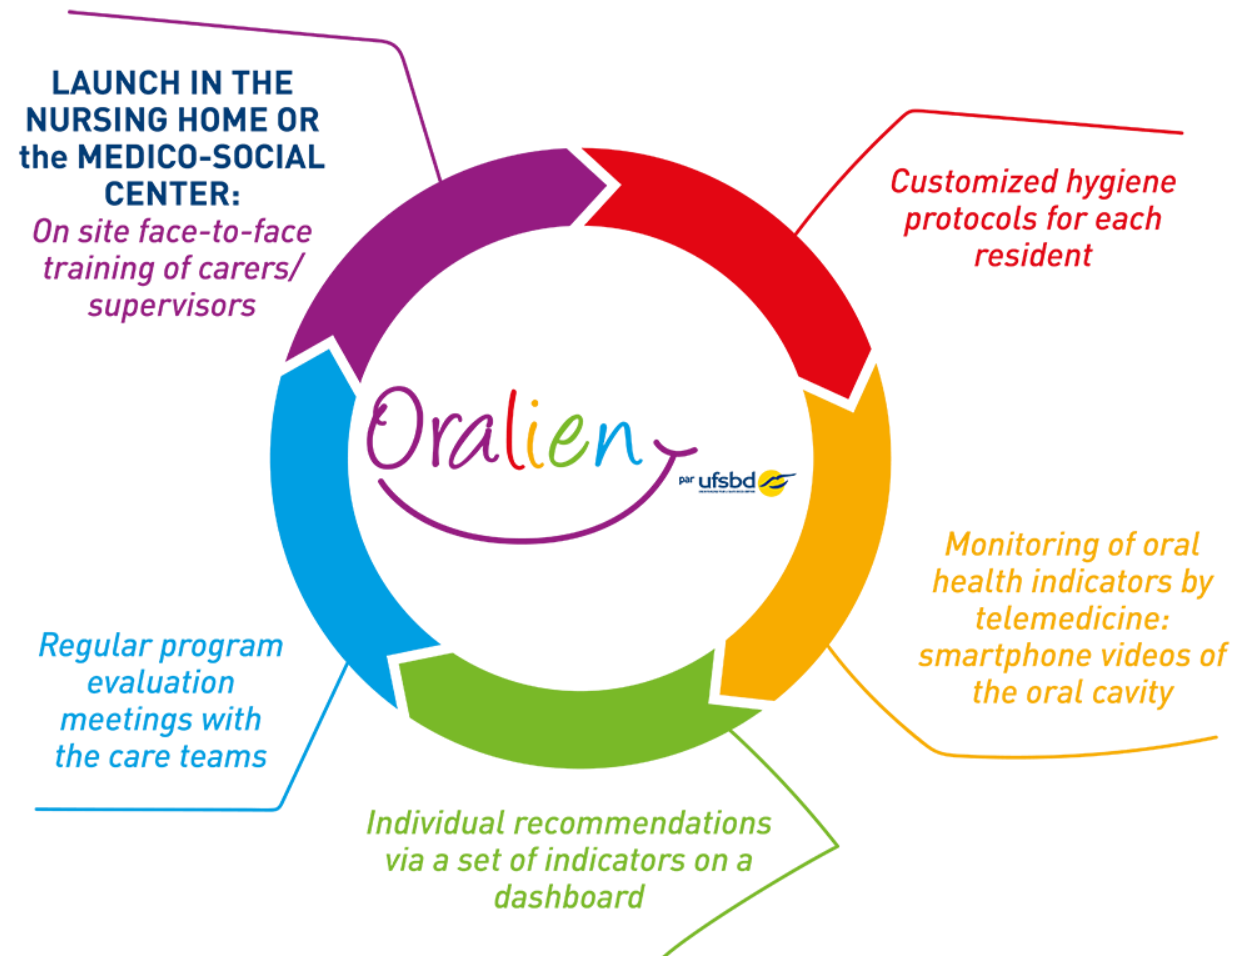

After more than 20 years of action
with dependent elderly people,
UFSBD wanted to explore the benefits of telemedicine ...

The ORALIEN program

▶ A comprehensive oral health management program for dependent elderly people

With Oralien, UFSBD relies on the opportunities of telemedicine and proposes to nursing homes a **comprehensive monitoring program placing oral health at the heart of their projects**

The different steps of the ORALIEN program

Staff Training : **on site** 1 day

Healthcare professionals, nurses, carers, etc.

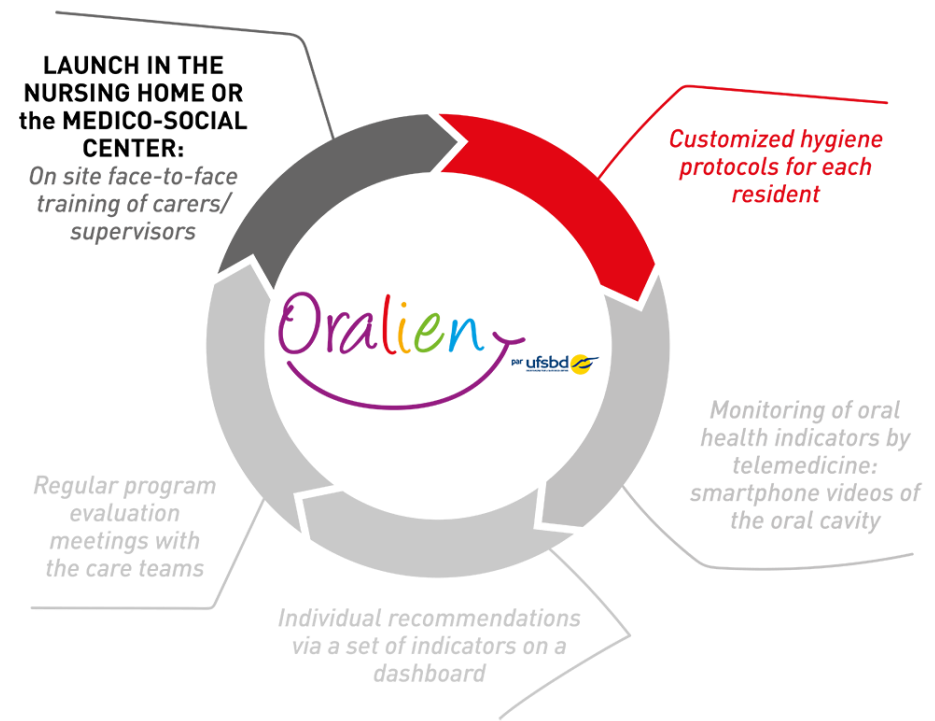

- 1 seven-hour day:
 - ½ day of theoretical and practical training (role-playing)
 - ½ day of practical training with study cases in rooms
- Maximum of 12 people

Objectives:

- Integrating oral hygiene into care provided by caregivers, and including oral care in the medical program of the nursing home
- Improving access to good oral hygiene and health for the elderly dependent people, through staff training
- Setting up customized oral hygiene protocols

The different steps of the ORALIEN program

At the end of the theoretical training, customized oral hygiene protocols are developed as an example

Trained staff is encouraged to keep developing protocols for all residents, over time

These protocols may be completed through data collected via tele-surveillance and the follow-up appointment at six months after training

The ORALIEN App

An ORALIEN referent appointed in the nursing home

Smartphone provided to the nursing home

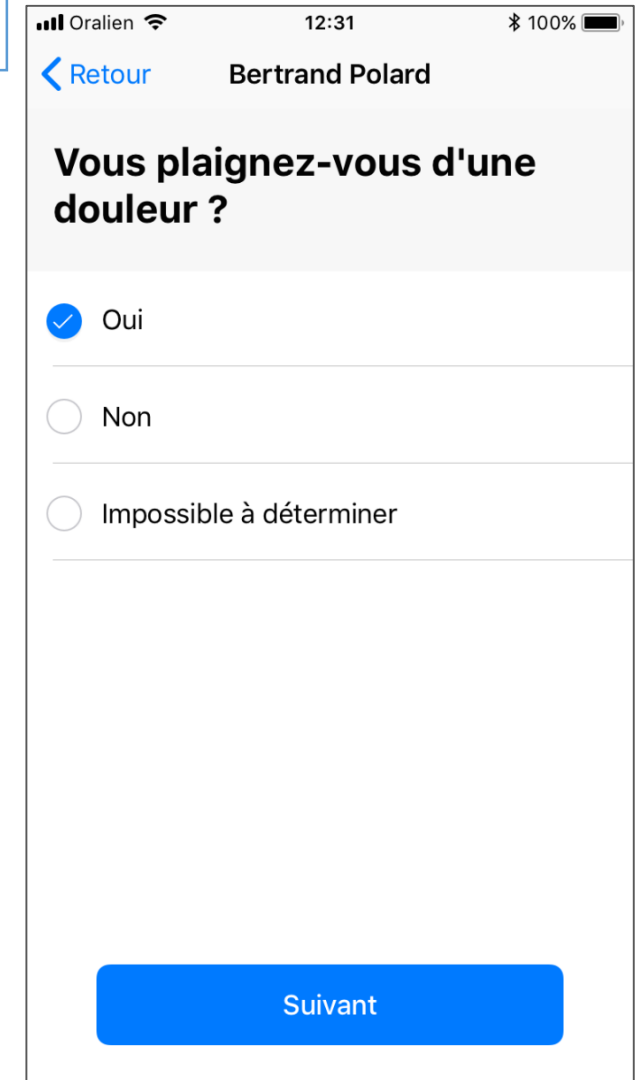

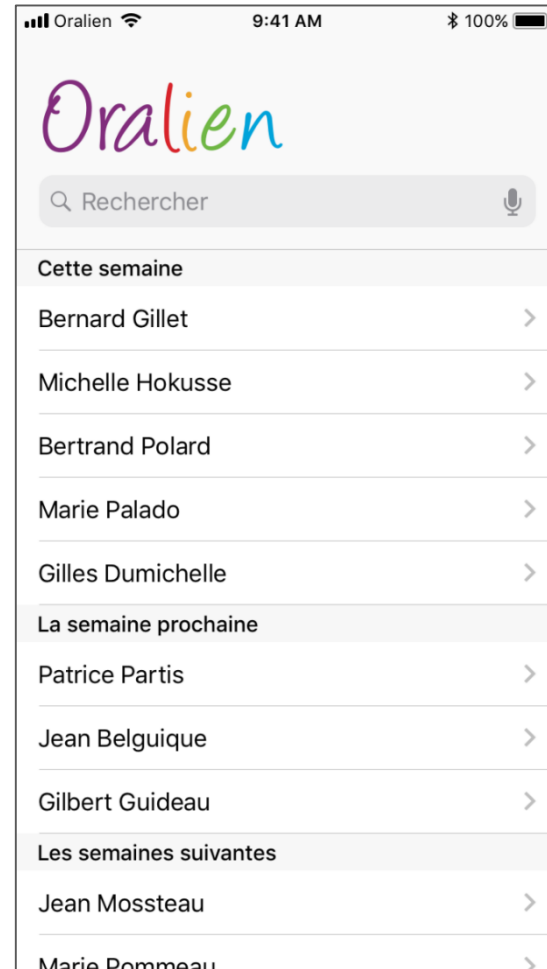

The list of residents who need the first scan

The data collected are:

- Anonymized
- Encrypted
- Hosted on a secure server

The referent answers several questions

Now it's time to take the scan

The referent performs the scan

Appropriate mouth-openers are used for each patient

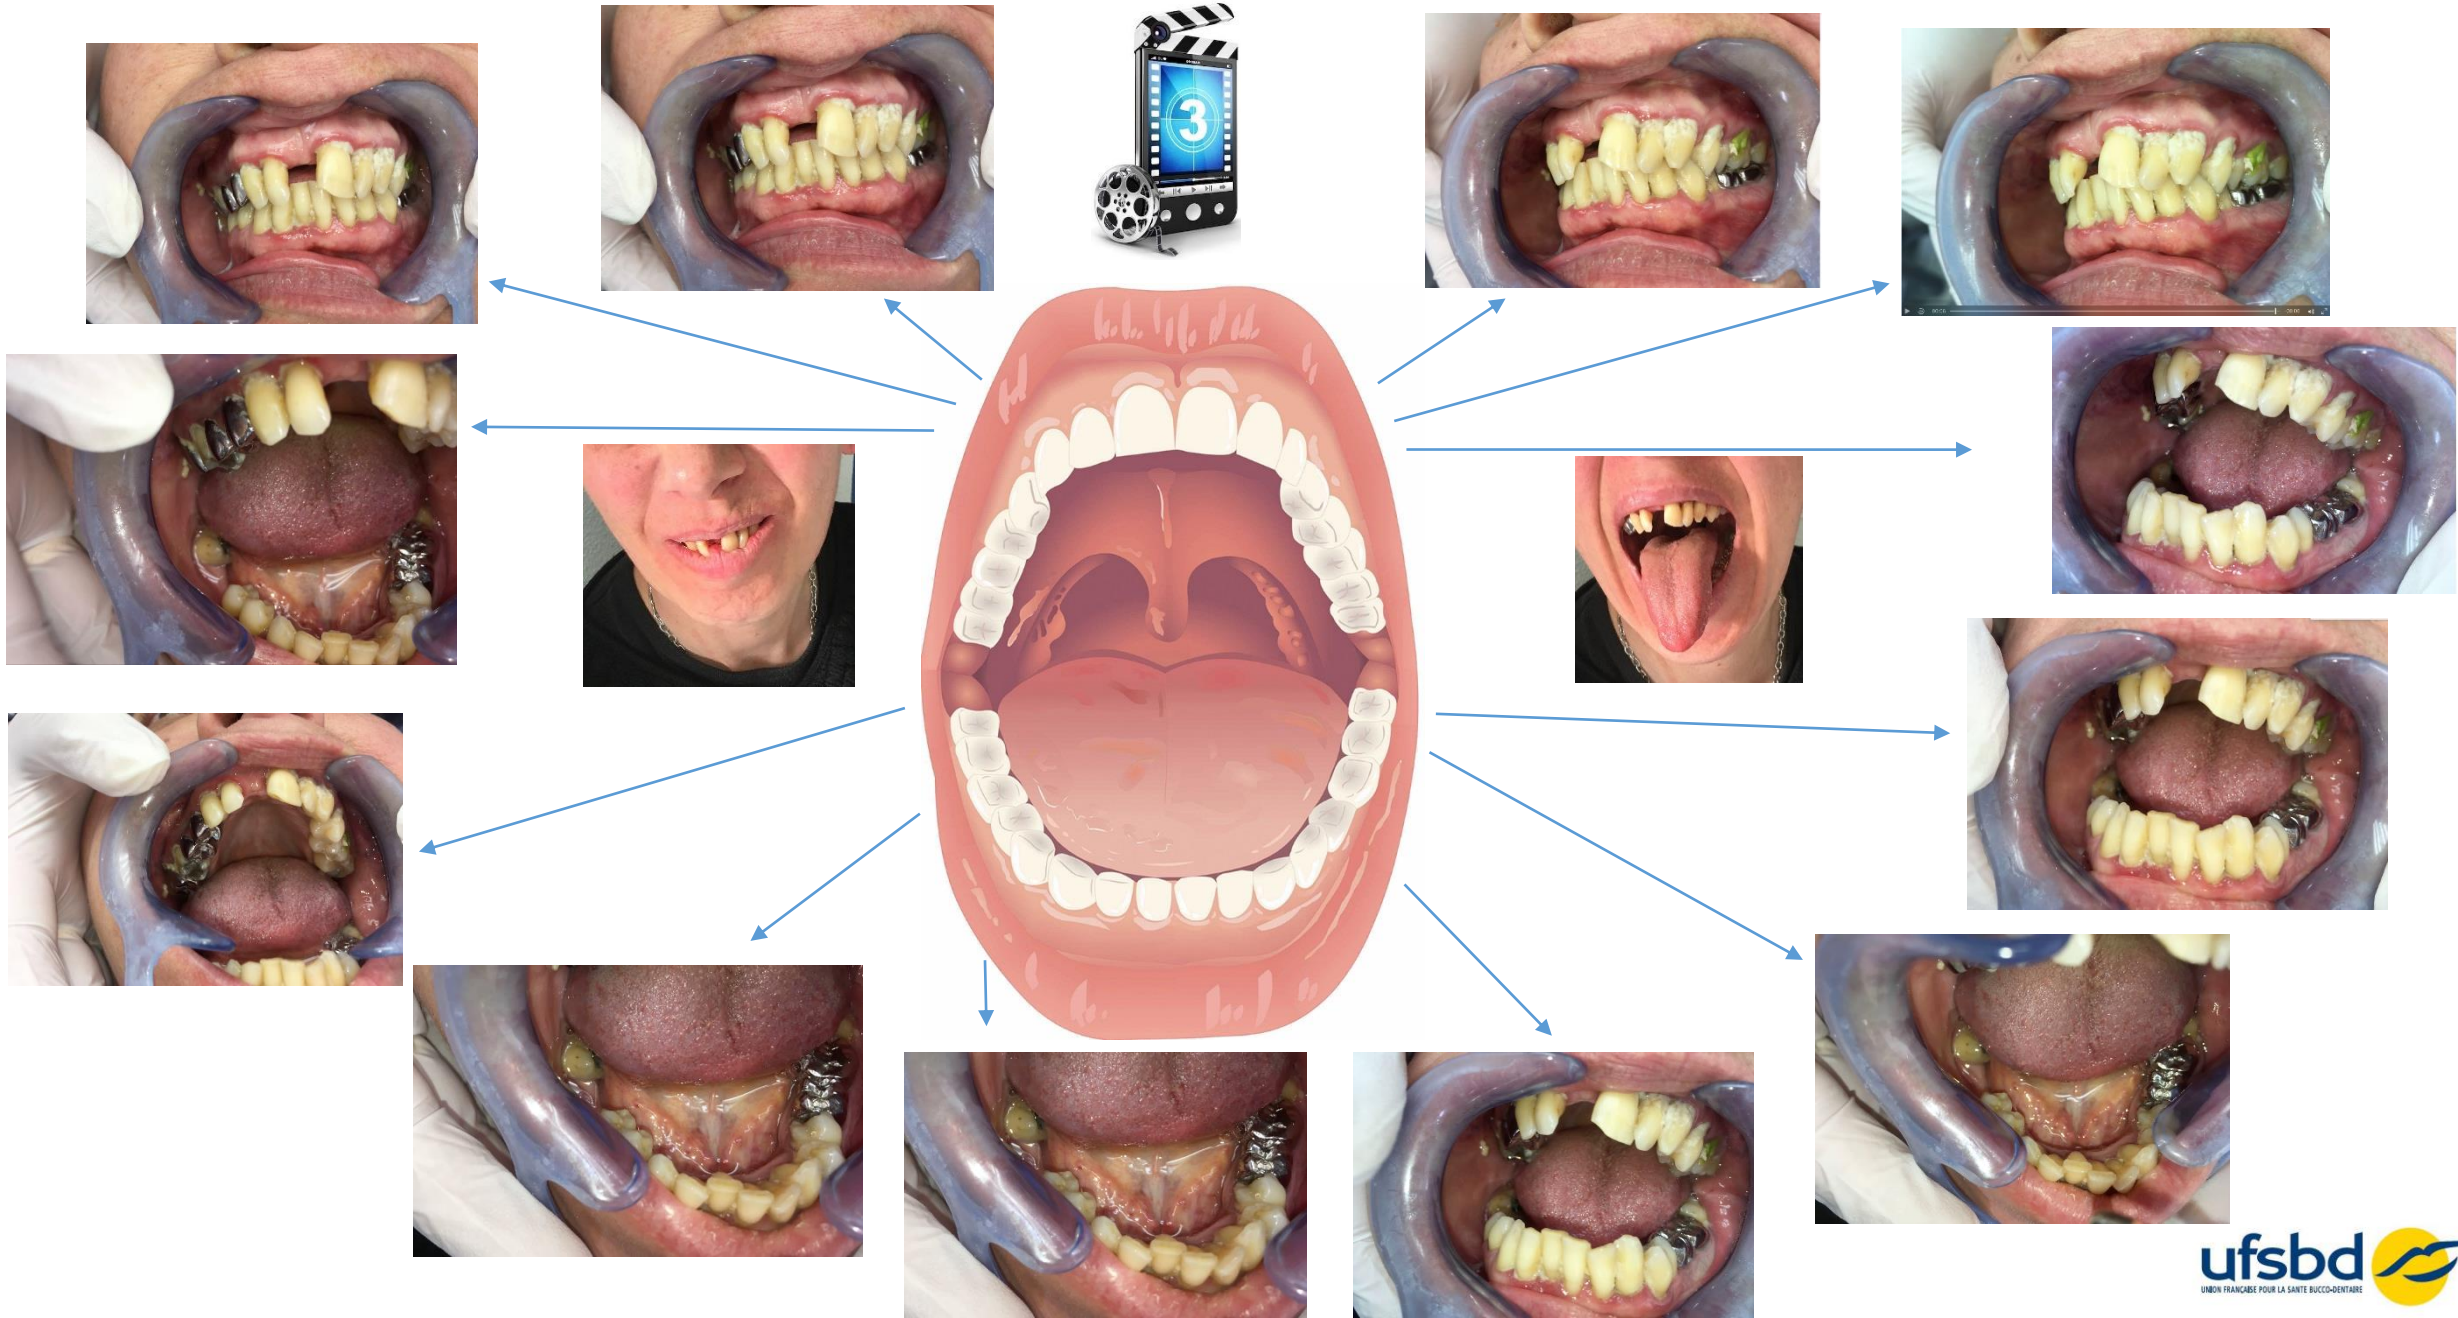

➡ The app guides the referent through each step of the scanning procedure

➡ After the scan, the data are transferred to the analysis platform, treated by artificial intelligence then validated by a dentist

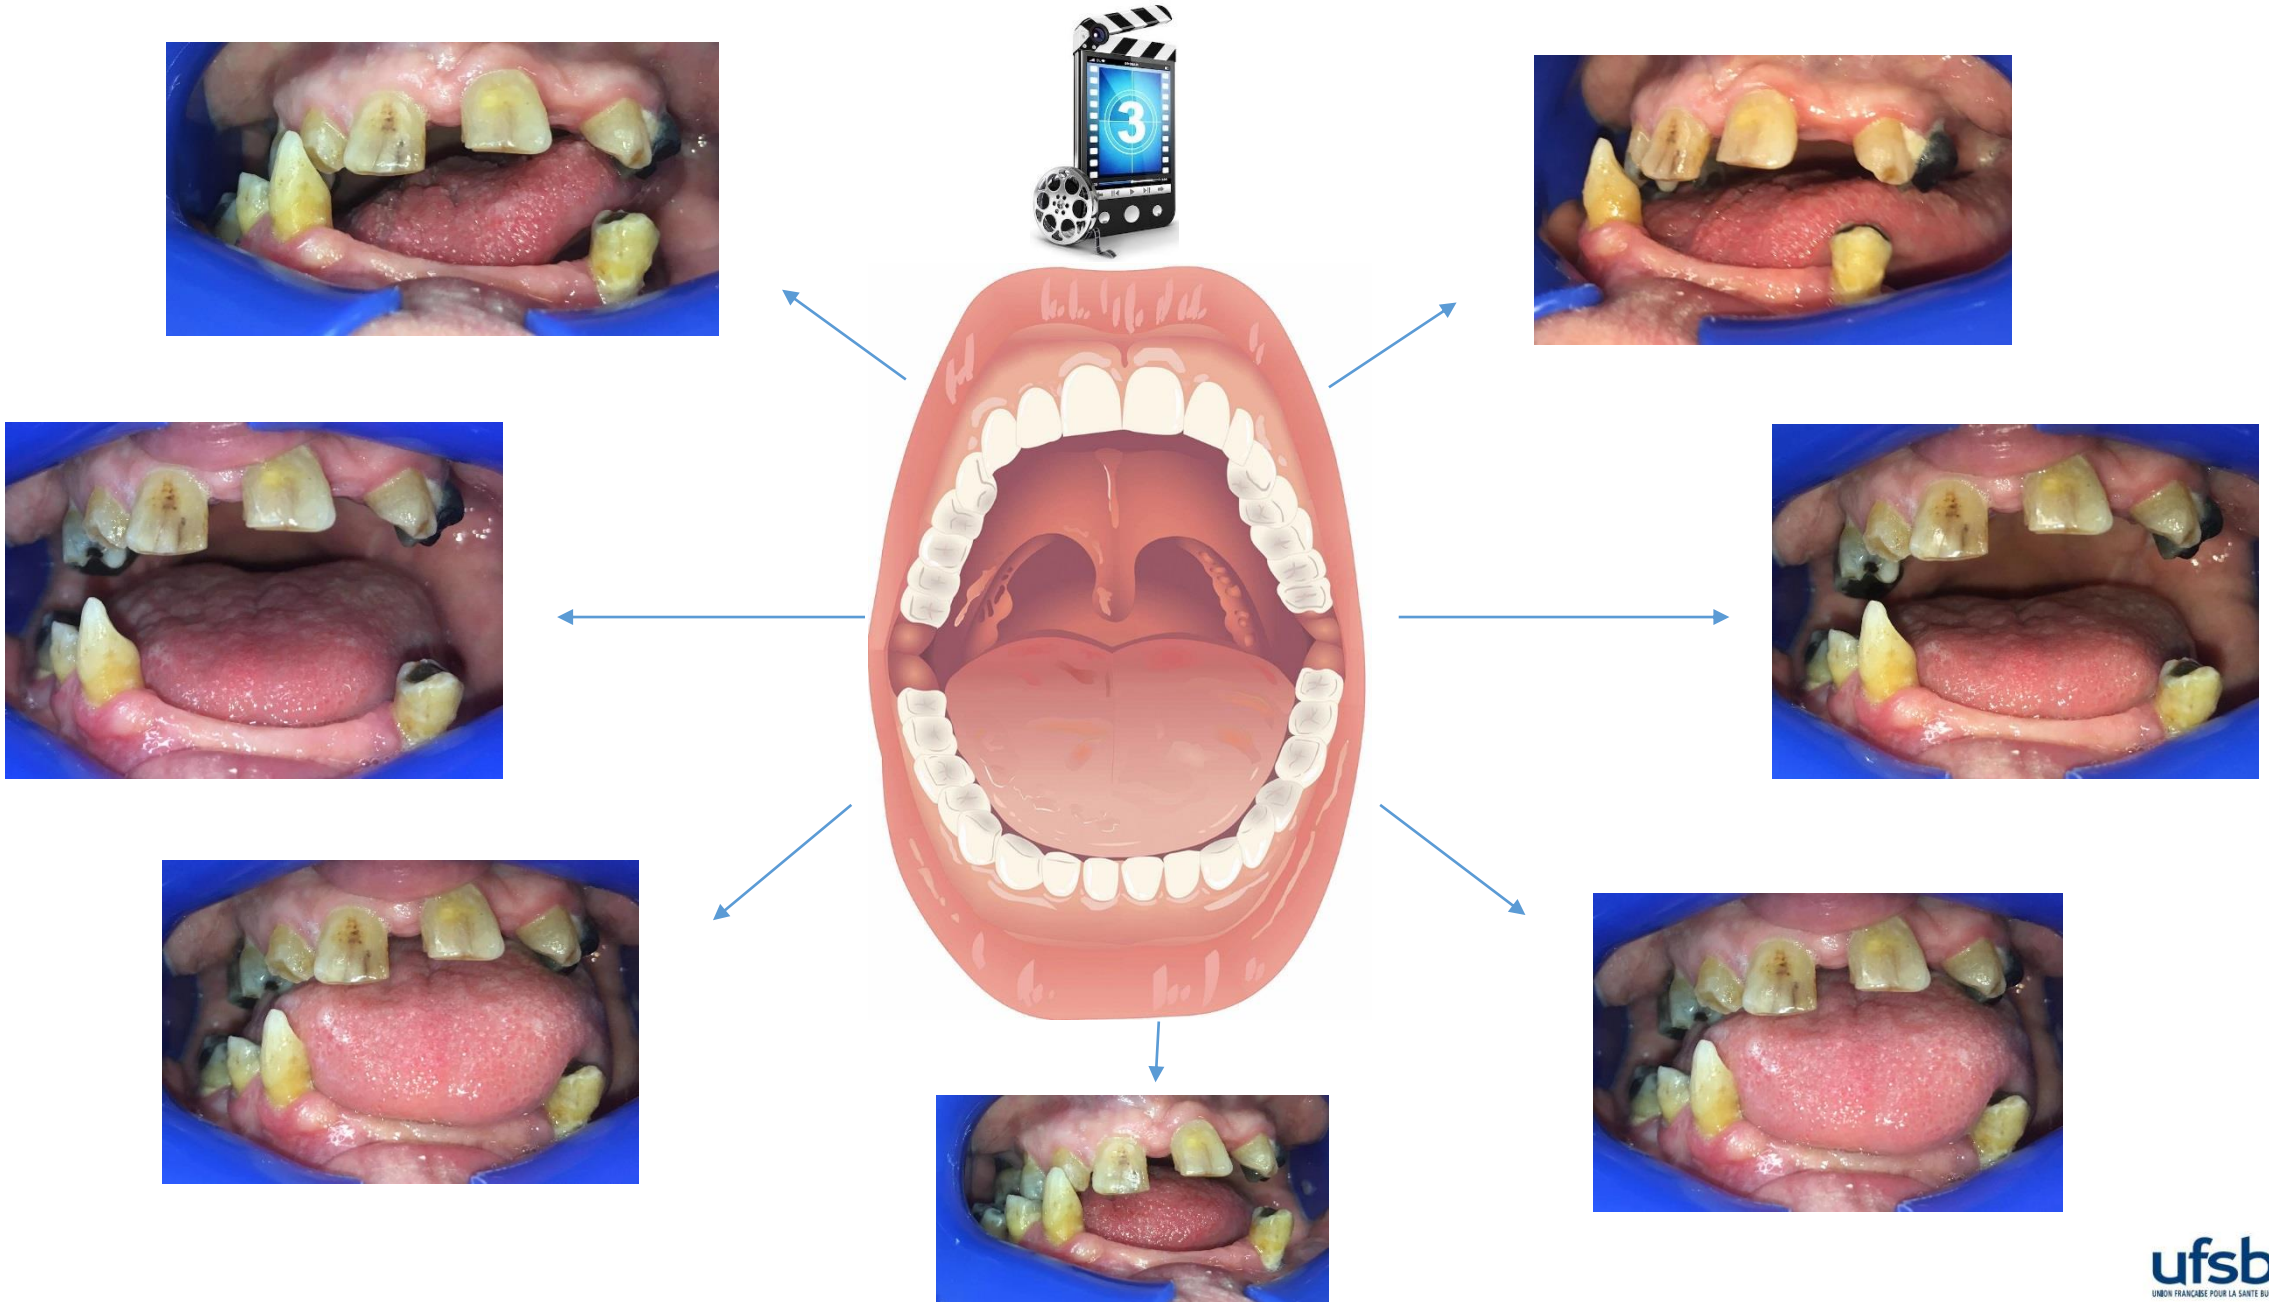

Video extracts managed by artificial intelligence – Case 1

Video extracts managed by artificial intelligence – Case 2

▶ An ergonomic application that fits into the daily routine of care staff

Reception of the report on the interface

- The data are analyzed by algorithms and the results are checked by a dentist. Recommendations are then sent for each patient, accessible via the secure Oralien website
- Follow-up of indicators via tele-surveillance is planned for each resident twice a year, together with scans in "dental emergencies"

The screenshot shows the 'LISTE DES PATIENTS' page for 'MARIE PALADO'. The patient's profile includes a photo monitoring status: 'Photo Monitoring - 23 mois restants' and 'Le monitoring en cours a été démarré le : 15 Jun 2017'. A red dashed box highlights a message: 'Le patient n'a pas activé l'application.' Below this are buttons for 'Partager le patient', 'Ajouter à la liste des tâches', and 'Nouvelle action'. A 'Envoyer le mail d'activation au patient' button is also present.

The main content area is titled 'ANALYSE DU 23 JANV. 2018' and contains a table with the following data:

INDICATEUR	RESULTAT
LÈVRES	Lèvres normales en apparence.
LANGUE	Langue chargée.
GENCIVES ET MUQUEUSES	Gencives et muqueuses normales en apparence. Pas de tartre associé.
SALIVE	Pas de sensation de bouche sèche.
PROTHESES	Perte des prothèses amovibles. Risque de dénutrition important. Consultation dentaire pour envisager la prothèse. Si ce n'est pas possible, contrôler le type de nourriture et opter pour une alimentation broyée et même mixée si nécessaire.
DENTS	Absence de caries visibles (à confronter avec l'examen clinique et radiographique). Absence d'au moins 4 dents non remplacées dans les sextants 3-4-5-6-8. Coefficient masticatoire très faible. Douleur permanente en regard du sextant g. Consultation dentaire (douleur).
HYGIENE	Bonne hygiène buccale, le patient se brossa les dents seul 2 à 3 fois par jour. Prise de neuroleptiques et d'antépileptiques. Pas d'héliste.
SOINS DENTAIRES ANTÉRIEURS	Pas de soins dentaires antérieurs.

At the bottom, two photo monitoring images are shown: one from 15 JUN 2017 and one from 23 JANV. 2018, each with a grid of smaller thumbnail images above it.

► An ergonomic application that fits into the daily routine of healthcare professionals

Zoom on individual scan results and associated recommendations

MONITORING	HISTORIQUE / ACTIONS	INFORMATIONS PATIENT	DERNIER SCAN DM
ANALYSE DU 23 JANV. 2018			
LÈVRES	Lèvres normales en apparence.		
LANGUE	Langue chargée.		
GENCIVES ET MUQUEUSES	Gencives et muqueuses normales en apparence. Pas de tartre associé.		
SALIVE	Pas de sensation de bouche sèche.		
PROTHESES	Perte des prothèses amovibles.		– Risque de dénutrition important. Consultation dentaire pour envisager la prothèse. Si ce n'est pas possible, contrôler le type de nourriture et opter pour une alimentation broyée et même mixée si nécessaire.
DENTS	Absence de caries visibles (à confronter avec l'examen clinique et radiographique).		
	Absence d'au moins 4 dents non remplacées dans les sextants 3.4.5.6.8. Coefficient masticoire très faible.		
	Douleur permanente en regard du sextant 6		! Consultation dentaire (douleur).
HYGIENE	Bonne hygiène buccale, le patient se brosse les dents seul 2 à 3 fois par jour. Prise de neuroleptiques et d'antiépileptiques. Pas d'halitose.		
SOINS DENTAIRE ANTÉRIEURS	Pas de soins dentaires antérieurs.		

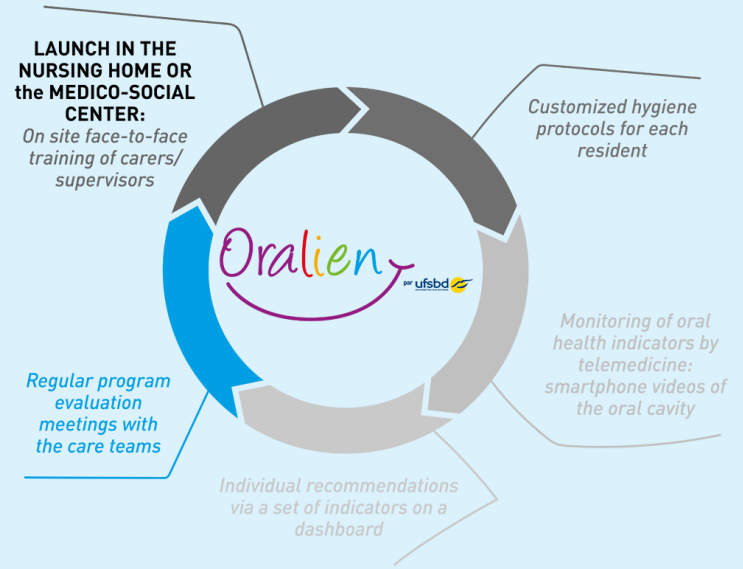

The different steps of the ORALIEN program

Assessment appointment with the healthcare supervisor

An appointment is scheduled within the nursing home between the Healthcare supervisor or the referent and a UFSBD dentist, after the first 6 months of monitoring.

- Analysis and discussion concerning the recommendations
- Analysis of carer's practices adjustment
- Tips to improve the management of oral health of residents on a daily basis
- Support for the management of care in dental practice

The strenghts of the ORALIEN program

- **Integration of oral health** into the project of the nursing homes
- Oral health **management** in close collaboration with a dentist
- **Initial training of care staff and supervisors** in the management of oral health, with annual top-up courses
- **Support of the care teams** throughout the program
- **Regular monitoring** and practical and pragmatic oral healthcare recommendations
- An easy to use program combining **human contact with algorithmic artificial intelligence**
- Optimized **oral healthcare monitoring** for a better **quality of life**
- The **identification of priority healthcare needs** for optimization of the care path
- **Secure data storage validated** by independent external firms.

Oralien

Innovative...

Through the maintenance of the link between patients and dentists

Innovative...

Because it creates a link between the center or the nursing home and dentists

Innovative...

Through the alliance of proximity and telemedicine

Oralien: a new program innovative in many ways

Innovative...

Through its ability to anticipate oral healthcare needs early

Innovative...

Because it helps and supports care staff on a daily basis

Innovative...

Through the set up and the adjustment of oral hygiene protocols
